Chronicle
News center · by **iomer**

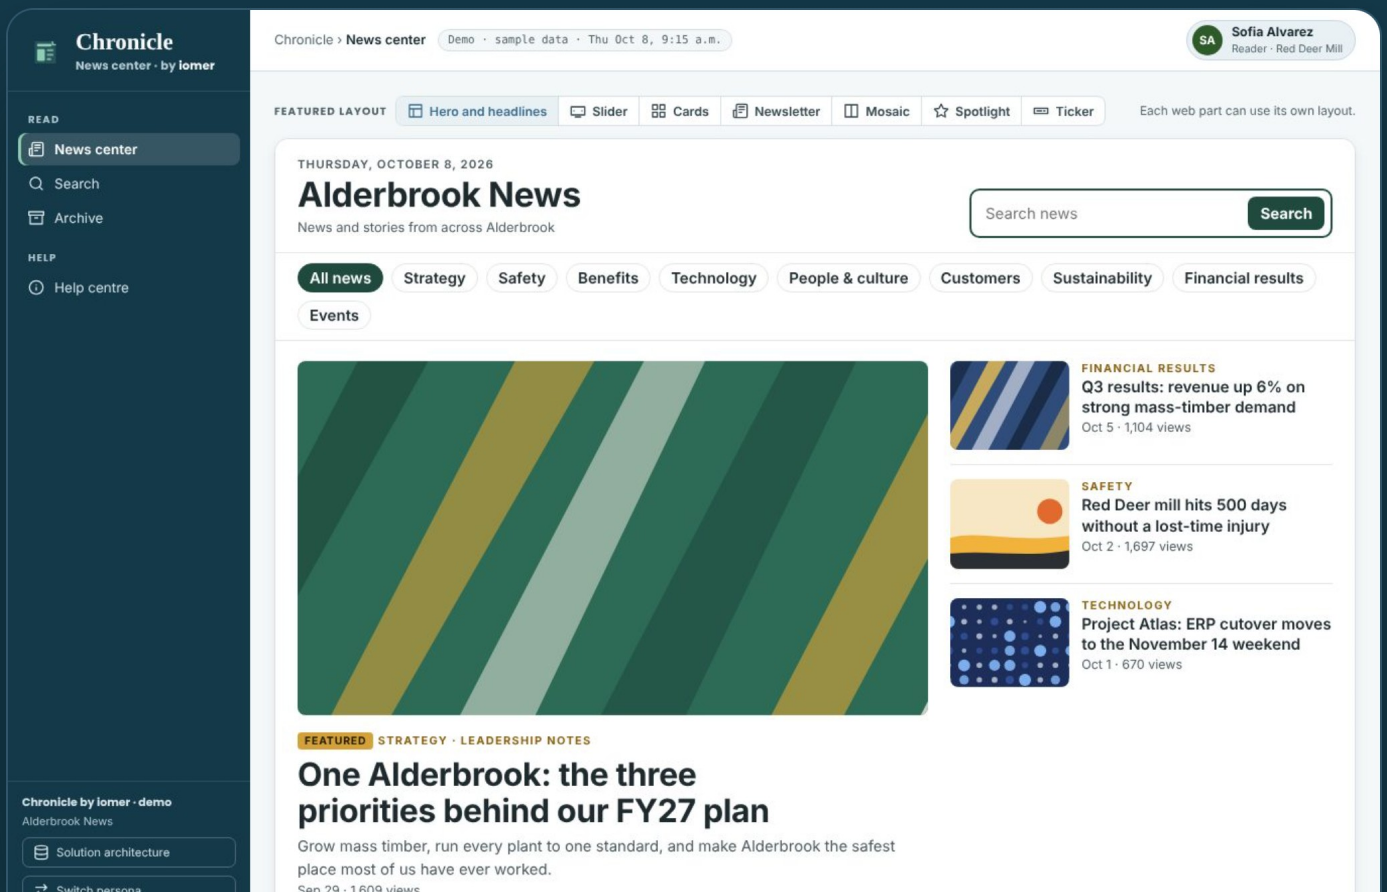

FOR SHAREPOINT ONLINE

THE IOMER NEWS SOLUTION

Every story, from draft to archive.

Chronicle is a news center for SharePoint. Authors write from templates, approvers review with every change marked, each story becomes a real SharePoint news page, and old news archives and retires on its own, all inside your own tenant.

Templates · Approvals · News pages · Archive

WHY CHRONICLE

News that looks right, gets approved, and doesn't go stale.

Intranet news usually means pages built by hand, approvals chased by email, and stories that stay on the home page long after they matter. Chronicle runs the whole life of a story from one place on your SharePoint news site.

1 Write

Start from one of twelve templates in a block designer with desktop and phone previews, and pull in pictures, documents and events from SharePoint.

2 Approve

Routing rules send each story to the right people: a manager, a department or topic lead, a campaign owner. Approvers can edit, and every change is marked.

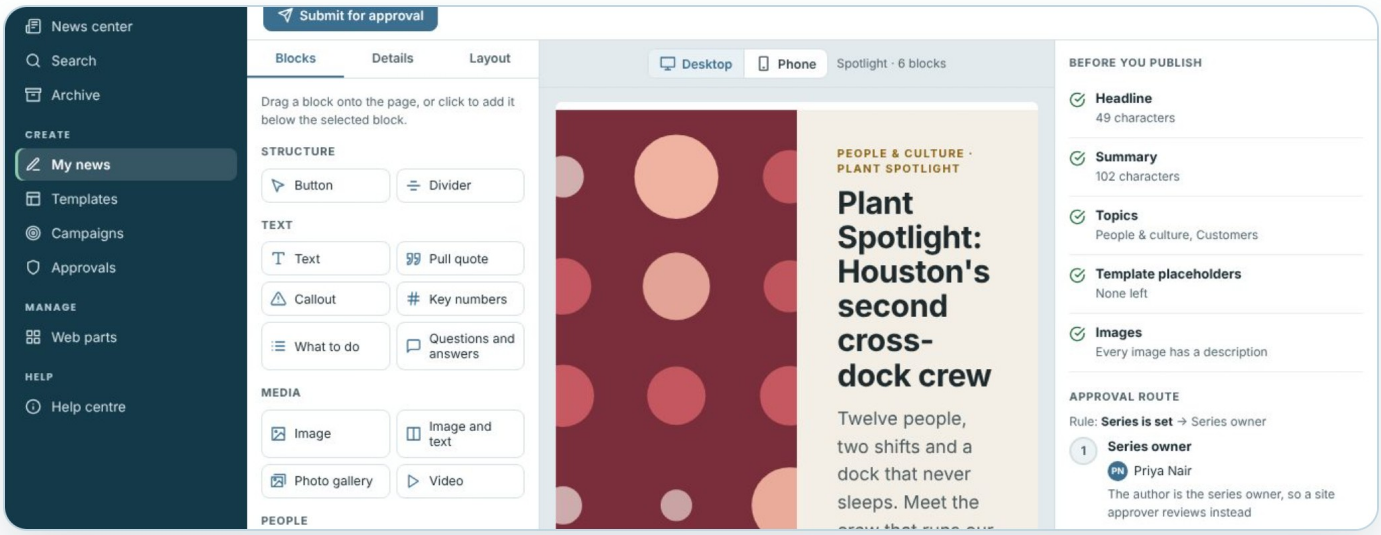

3 Publish

Each story becomes a real SharePoint news page, promoted as news, now or at a scheduled time. Owners choose what's featured and for how long.

4 Keep it current

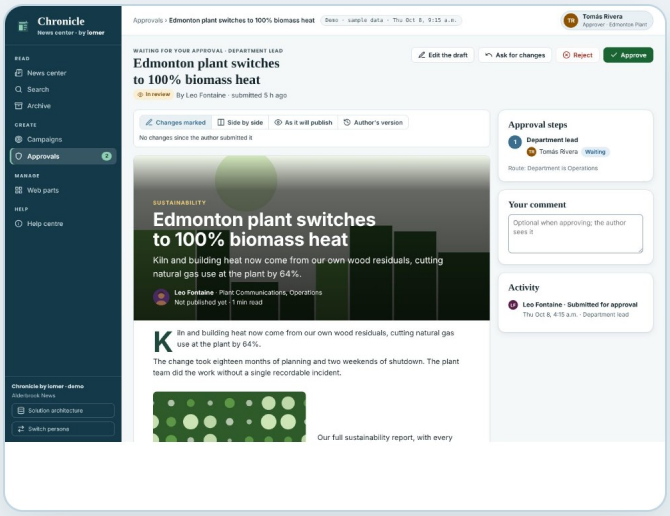

Archive and retire rules by topic, series or campaign move old news to the archive and then the recycle bin, with authors reminded first.

The page designer: blocks on the left, the story in the middle, the checklist and approval route on the right.

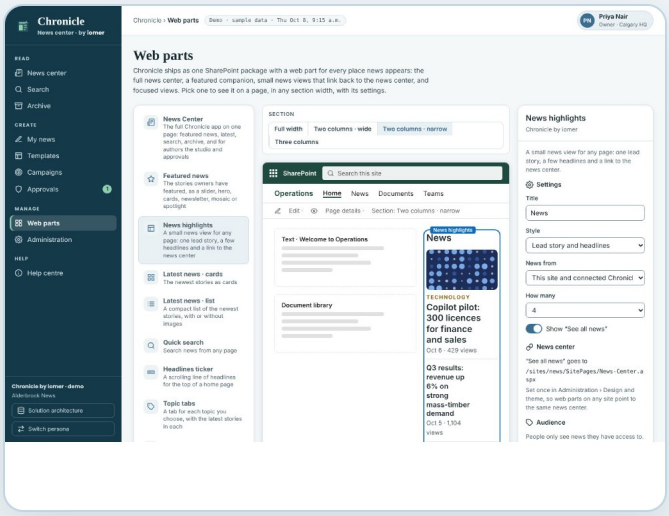

FOR EVERY ROLE

Built for everyone who touches the news.

Approvers see changes marked, side by side or as it will publish, and approve, ask for changes or reject.

Twelve news web parts put the latest stories on any site and link back to the news center (sample data).

Readers

A news center with featured stories, topics, search and an archive; save stories for later and react.

Authors

Templates, a block designer, a checklist before publishing, and the approval route shown in advance.

Approvers

An approvals inbox and editing rights on the draft, with every change they make tracked.

Owners

Featured news, archive and retire rules, templates, the news brand and campaigns.

Auditors

Read every setting, the approval history and the audit log without changing anything.

Administrators

Roles, workflows and routing, taxonomy, Herald connections, and Setup checks that find and repair problems.

BUILT FOR MICROSOFT 365

Nothing else to host.

Chronicle runs entirely in your Microsoft 365 tenant. There is no iomer service: every story, approval and setting stays in SharePoint lists on your own news site.

SHAREPOINT

The web parts, your records, and a news page for every story.

POWER AUTOMATE

Two flows: email, and on-time publishing with the nightly archive.

ENTRA ID

Managers, departments and groups for routing, read-only.

OUTLOOK

Approvers and authors told when news needs them.

SEARCH

Story text indexed with each page, archive included.

HERALD

Shared campaigns, and stories suggested to newsletters.

Up and running

01

Add the Chronicle apps to your app catalog.

02

Approve its two Graph permissions.

03

Add the web part and run guided setup.

04

Give roles, then import the two flows.

▷ **Try it first.** The Chronicle Demo package has sample news and every role to switch between, and saves nothing.
